Panoramic Corporation Launches PC-4000

Fort Wayne, Indiana – **Panoramic Corporation officially announces the release of its fully integrated PC-4000 digital panoramic X-ray system.** Panoramic has long been recognized for developing products designed with enduring performance at an unparalleled value. Carrying on the brand tradition, the PC-4000 combines a legacy of proven performance with cutting edge digital technology.

The PC-4000 produces extraordinary images by coupling an advanced x-ray energy source with an exclusive Cadmium Telluride (CdTe) sensor. This proprietary digital sensor provides a unique feature among panoramic systems that allows adjustment of the focal layer to the ideal for the individual patient.

“Years of market involvement and development have resulted in the state-of-the-art PC-4000 digital panoramic x-ray system. Unquestionably, the PC-4000 produces one of the best images available,” Eric Stetzel, Founder of Panoramic. “Coming from a family of dentists, I understand the incredible value panoramic systems can provide and I believe the new PC-4000 offers practitioners a complete package with the latest digital technology and at a very affordable price.”

Panoramic Corporation is the panoramic x-ray leader with the PC-1000 film unit and the 1000-DR digital conversion kit. Since 1986, more panoramic units have been installed by Panoramic than any other. Built in Fort Wayne, Indiana, thousands of dentists rely on Panoramic’s products and services for everyday peak performance.
